

Report

Of

A One-Month Internship in Web Development at VaultofCodes.in

Submitted

To

School of Computer Science and Engineering

IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of

B.Tech CSE

By

Roll Number of Student: CS-2341784

Name of Student: DRISTY PAL

Batch: 2026-27

CANDIDATE'S DECLARATION

I, Dristy Pal, do hereby declare that the internship report titled “A One-Month Internship in Web Development at VaultofCodes.in” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering. All the references have been quoted and I have not taken as such any material from any other source. I affirm that this report is my own work and has not been submitted to any other institute for any degree/diploma requirement, and further I shall be solely responsible for any kind of copyright violation in this regard.

Signature: _____

Student Name: Dristy Pal

Roll No.: CS-2341784

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the internship program. I am thankful for their aspiring guidance, invaluable constructive criticism, and friendly advice during this work. I am sincerely grateful to VaultofCodes.in for providing me the platform to undertake this one-month internship in Web Development, and to Mr. Kartik Ahlawat, Founder, and Ms. Varshita Singh, HR Manager, for their support and mentorship throughout the program.

I would also like to thank the faculty of the School of Computer Science and Engineering, IILM University, Greater Noida, for their continuous encouragement and guidance in the successful completion of this internship and report.

I express my gratitude to my parents for their blessings.

4. PROJECT DESCRIPTION

4.1 Introduction

As part of the curriculum requirement of the B.Tech in Computer Science and Engineering program at IILM University, I undertook a one-month virtual internship in Web Development with VaultofCodes.in, an AICTE-recognized internship platform, starting from 05 November 2025. The internship was designed to provide hands-on, industry-oriented exposure to front-end web technologies and real-world project workflows, going beyond the theoretical foundation covered in the classroom.

During the internship, I worked on live coding tasks and project assignments centred on HTML, CSS, and JavaScript, culminating in the successful submission of two projects and the award of an AICTE-verified Internship Completion Certificate, authenticated with a QR-code verification system.

4.2 Organization Profile

VaultofCodes.in is an AICTE-recognized online internship and skill-development platform that offers structured, mentor-guided virtual internships to engineering and technology students. The platform is recognized as a Google for Education partner and provides learners with project-based learning, verified completion certificates, and QR-code-based certificate authentication to confirm the authenticity of a student's performance and project record. The internship program I was enrolled in was led by Mr. Kartik Ahlawat (Founder) and coordinated by Ms. Varshita Singh (HR Manager).

4.3 Problem Statement

Academic coursework in computer science often emphasizes programming fundamentals and theory but provides limited opportunity to apply front-end web development concepts to complete, deployable projects. There was a need for a structured, guided environment in which foundational HTML, CSS, and JavaScript knowledge could be translated into working, responsive websites that function correctly across different devices and browsers -- which this internship was designed to address.

4.4 Project Objectives

- To gain practical, hands-on experience in front-end web development using HTML, CSS, and JavaScript.
- To design and build responsive web pages that render correctly across different devices and browsers.
- To develop a personal portfolio website showcasing skills and projects.

- To design and implement a dynamic registration form with client-side validation and interactivity.
- To understand and apply core UI/UX design principles in real project work.
- To gain exposure to real-world project workflows, from planning through testing and submission.

4.5 Scope of the Project

The scope of the internship was limited to client-side (front-end) web development. It covered structuring web content with HTML, styling and layout with CSS, and adding interactivity and validation using JavaScript. The projects built during the internship -- a personal portfolio website and a dynamic registration form -- were tested for responsiveness and consistent behaviour across multiple devices and web browsers, but did not extend to back-end development, database integration, or server-side deployment.

4.6 Technologies and Tools Used

- HTML5 -- for structuring the content and layout of web pages.
- CSS3 -- for styling, layout design, and building responsive interfaces.
- JavaScript -- for adding interactivity, form validation, and dynamic behaviour.
- Code editor and web browsers -- used for development and for cross-browser/cross-device testing.

4.7 System Architecture

The projects developed during the internship followed a simple, layered client-side architecture typical of static front-end web applications:

- Structure Layer (HTML) -- defines the semantic content and page structure.
- Presentation Layer (CSS) -- controls layout, visual styling, and responsiveness across screen sizes.
- Behaviour Layer (JavaScript) -- handles user interactions, form validation, and dynamic updates to the page.

All three layers were combined into the final deliverables -- the portfolio website and the registration form -- both of which run entirely in the browser without requiring a back-end server.

4.8 Methodology

- Requirement understanding: reviewing each task/project brief provided during the internship.
- Planning and design: sketching the page layout and structure before coding.
- Implementation: writing semantic HTML, styling with CSS, and adding JavaScript-based interactivity.
- Testing: checking each page for responsiveness and consistent behaviour across devices and browsers.
- Review and submission: submitting completed projects for evaluation as per the internship program's process.
- Certification: receiving the AICTE-verified Internship Completion Certificate upon successful project submission.

4.9 Expected Outcomes

- A fully functional, responsive personal portfolio website.
- A dynamic registration form with working client-side validation and interactivity.
- Strengthened practical skills in HTML, CSS, and JavaScript, and in front-end UI/UX principles.
- Familiarity with real-world, industry-style project workflows.
- An AICTE-verified Internship Completion Certificate with QR-code authentication.

4.10 Certificate of Completion and Communication Proof

The AICTE-verified Internship Completion Certificate issued by VaultofCodes.in, along with its QR-code verification, has been attached in Chapter 3 of this report (Internship Completion Certificate). The certificate confirms successful completion of the one-month Web Development internship starting 05/11/2025, and can be independently verified by scanning the QR code printed on it, which links to the student's detailed performance report and project statistics.
